BURGESS, BARBARA N

ART UNIT

PAPER NUMBER

2157

DATE MAILED: 05/19/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/075,395	Applicant(s) MAEDA ET AL.	
	Examiner Barbara N. Burgess	Art Unit 2157	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 February 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This Office Action is in response to amendment filed February 6, 2006. Claims 1-17 are presented for further examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 5, 7-9, 11-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Lohr et al. (hereinafter "Lohr", US Patent Publication 2002/0112063 A1).

As per claim 1, Lohr discloses a mobile agent transfer system comprising:

- Server (paragraph [0022]);
- Portable device (paragraph [0004, 0022]);
- Wherein a mobile agent is transferred between said server and said portable device (paragraph [0026-0027]);
- Wherein said server has a configuration so as to transfer, to said portable device, a place code used to implement, on a side of said portable device, an environment in which said mobile agent is able to be executed when said mobile agent is transferred from said server to said portable device (paragraph 0043-0044));

Art Unit: 2157

- Wherein said portable device has a configuration so as to implement, on a side of said portable device and based on said place code transferred from said server, an environment in which said mobile agent able be executed (paragraph [0050, 0052]).

As per claim 2, Lohr discloses the mobile agent transfer system for portable devices according to Claim 1, wherein said place code is used to implement, on said portable device, an agent unarchiving section used to reconstruct said mobile agent based on information transmitted from said server a portable device side calculation processing section to run mobile agent reconstructed by said agent transmit said mobile agent said portable device calculation processing section said device has a program control section implement, portable device, said agent unarchiving section, said portable device side calculation processing section, said agent transmitting section based on said place code transmitted from said server (paragraphs [0043-0044, 0054-0055]).

As per claim 3, Lohr discloses a mobile agent transfer system for mobile communicating devices comprising:

- server (paragraph [0022]);
- Mobile communicating device (paragraph [0004, 0022]);
- An information transfer device to connect said mobile communicating device to said server (paragraph [0024]);

- Wherein a mobile agent is transferred between said server and said mobile communicating device through said information transfer device (paragraph [0026-0027]);
- Wherein said server has server side calculation processing section to run said mobile agent, an agent transferring section used to transfer, to said mobile communicating device, information about an internal state of said mobile agent, program code of said mobile agent, a place code used to implement, on said mobile communicating device, an agent reconstructing section and agent transmitting section, and an agent receiving section used to retrieve said mobile agent transferred from said mobile communicating device and to put said mobile agent into a state where said mobile agent is able to start operations in said server side calculation processing section (paragraphs [0043-0044, 0054-0055]);
- Wherein said mobile communicating device program acquiring section used acquire information about internal state mobile agent, said program code mobile agent, and said place code transmitted from said server and program control section implement, on said mobile communicating device, said agent reconstructing section, said mobile communicating device side calculation processing section and said agent transmitting section, based on said place code acquired by said program acquiring section, wherein said agent reconstructing section has a configuration so as to reconstruct said mobile agent based on said information about internal states of said mobile agent wherein said mobile and said program code of said mobile agent, communicating device side calculation processing section has a configuration

Art Unit: 2157

so as to run said mobile agent reconstructed by said agent reconstructing section and wherein said agent transmitting section has a configuration so as to transmit said mobile agent having completed operations in said portable side calculation processing section to said server (paragraphs [0042-0045, 0055-0057]).

As per claim 5, Lohr discloses the mobile agent transfer system for mobile communicating devices according to Claim 3, wherein said server has a movement number managing section used create and manage a movement number required to ignore messages other than a message that has first arrived when plurality of messages each having same contents to transfer mobile agent has reached said agent receiving section from said agent transmitting section in said mobile communicating device due to failure network (paragraphs [0035-0038]).

As per claim 7, Lohr discloses a method for transferring a mobile agent for portable devices between a portable device and server, said method comprising:

- Step in which said server transfers, to said portable device, a place code used to implement, on side of said portable device, an environment in which said mobile agent is able to be executed when said mobile agent is transferred from said server to said portable device (paragraphs [0022-0024, 0050-0052]);
- Step in which said, portable device implements, on sad portable device and based on said place code transferred from said server, an environment in which said mobile agent is executed (paragraphs [0022, 0026]).

As per claim 8, Lohr disclose the method for transferring the mobile agent for portable devices according to Claim 7, wherein said place code is used to implement, on said portable device, an agent reconstructing section used to reconstruct said mobile agent based on information transmitted from said server, processing section to run said mobile agent reconstructed by said agent reconstructing section, and an agent transmitting section used to transfer said mobile agent having completed operations processing section to said server and wherein said portable device has a program control section to implement on place code transmitted from said server, said agent reconstructing section, said portable device side calculation processing section and said agent transmitting section (paragraph [0042-0044, 0050]).

As per claim 9, Lohr discloses a method transferring a mobile agent for portable devices for transferring said mobile agent between a portable device and a server, method comprising:

- A step in which said server transfers information about an internal state mobile agent, a program code of said mobile agent, and a place code used to implement, on said portable device an agent reconstructing section, portable device side calculation processing section, agent transmitting section, said portable device (paragraphs [0004, 0036]);
- A step in which said portable device implements based on said place code transmitted from said server, said agent reconstructing section, portable device side

calculation processing section, and said agent transmitting section (paragraphs [0038, 0043]);

- Step which said agent reconstructing section reconstructs said mobile agent, based on said information about said internal states and said program code said mobile agent transmitted from said server (paragraphs [0041]);
- Step in which said portable device side calculation processing section executes said mobile agent that has been reconstructed by said agent reconstructing section (paragraphs [0044, 0046]);
- Step in which said agent transmitting section transmits said mobile agent having completed operations in said portable device side calculation processing section (paragraph [0053]).

As per claim 11, Lohr discloses the method for transferring the mobile agent for portable devices according to claim 9, wherein said server creates and manages a movement number required to ignore messages other than a message that has first arrived when a plurality of messages each having same contents to transfer a mobile agent has reached said agent receiving section from said portable device due to a failure of a network (paragraphs [0035-0038]).

As per claim 12, Lohr discloses a program for implementing a mobile agent transfer system for portable devices to enable a mobile agent to be transferred between a computer for a portable device and a computer f or a server comprising:

Art Unit: 2157

- Processing of having said computer f or said server transfer a place code used to implement, on said computer for said portable device, an environment in which said mobile agent is able to be executed when said mobile agent is transferred to said computer said portable device (paragraphs [0022-0024, 0050-0052]);
- Processing of having said computer for said portable device implement, on said computer for said portable device and based on a place code transferred from said computer for said server, an environment in which said mobile agent is able to be executed (paragraphs [0022, 0026]).

As per claim 13, Lohr discloses a program for implementing a mobile agent transfer system for portable devices to enable a mobile agent to be transferred comprising:

- Processing of having said computer for said server function as a server computer side calculation processing section said mobile agent as an agent transferring section to transfer, said computer for said portable device, information about internal states of said mobile agent and about a program code said mobile agent and a place code used implement, on said computer for said portable device and based on internal states and program code of said mobile agent transmitted from said computer said server, agent unarchiving section reconstruct side calculation processing section to run said mobile agent reconstructed by said agent unarchiving section, and an agent transmitting section transmit said mobile agent having completed operations in said portable device side calculation processing section said computer for said server, and as an agent receiving section said portable

Art Unit: 2157

device and to put said mobile agent into a state where said mobile agent is able to start operations on said server computer side calculation processing section (paragraphs [0043-0044, 0054-0055]);

- Processing of having said computer for said portable device function as a program acquiring section to acquire information about internal states and program code of said mobile agent transmitted from said computer for said server and a place code, and as a program control section to implement, on said computer for said portable device and based on said place code acquired said agent transmitting section (paragraph [0042-0044, 0050]).

As per claim 14, Lohr discloses a storage medium storing a program for implementing a mobile agent transfer system portable devices to enable a mobile agent agent to be transferred between a computer for a portable device and a computer for a server comprising:

- Processing of having said computer f or said server transfer a place code used to implement, on said computer for said portable device, an environment in which said mobile agent is able to be executed when said mobile agent for said portable device; and is transferred to said computer (paragraph 0043-0044)];
- Processing of having said computer for said portable device implement, on said computer for said portable device and based on a place code transferred from said computer for said server, an environment in which said mobile agent is able to be executed (paragraphs [0022, 0026]).

As per claim 15, Lohr discloses a storage medium storing a program for implementing a mobile agent transfer system for portable devices enable a mobile agent to be transferred between a computer for a portable device and a computer server comprising:

- Processing of having said computer for said server function as a server computer side calculation processing section to run said mobile agent, as an agent transferring section to transfer, said computer for said portable device, information about internal states of said mobile agent and about a program code of said mobile agent and a place code used to implement on said computer for said portable device and based internal states program code mobile agent transmitted from computer said server, agent unarchiving section portable device side calculation agent unarchiving section, transmit said mobile agent having completed operations in said portable device side calculation processing section said computer for said server, and as an agent receiving section to unarchive said mobile agent transferred from said computer for said portable device and to put said mobile agent a state where said mobile agent is able to start operations on said server computer side calculation processing section (paragraphs [0043-0044, 0054-0055]);
- Processing of having said computer for said portable device function as a program acquiring section to acquire information about internal states and program code said mobile agent transmitted from said computer and as a program control section to implement, on said computer for said portable device and based on said place code

Art Unit: 2157

acquired by said program acquiring section, said agent unarchiving section, said portable device side calculation processing section, and said agent transmitting section (paragraph [0042-0044, 0050]).

As per claim 16, Lohr discloses a mobile agent transfer system for mobile communicating devices comprising:

- server (paragraph [0022]);
- Mobile communicating device (paragraph [0004, 0022]);
- Wherein a mobile agent is transferred between said server and said mobile communicating device (paragraph [0026-0027]);
- Wherein said server has a configuration so as to transfer, said mobile communicating device, place implement, side said mobile communicating device, said mobile agent is transferred from said communicating device (paragraph 0043-0044)];
- Wherein said mobile communicating device has configuration as implement, on a side of said mobile communicating device and based on said place code transferred from said server, an environment in which said mobile agent is able be executed (paragraph [0050, 0052]).

As per claim 17, Lohr discloses the mobile agent transfer devices according to Claim 16, implement, on said mobile system for mobile communicating wherein said place code is used communicating device, an agent reconstructing section to reconstruct said

Art Unit: 2157

mobile agent based on information transmitted from said server, a mobile communicating device side calculation processing section run said mobile agent reconstructed by said agent reconstructing section, and an agent transmitting section used to transmit said mobile agent having completed operations said portable device side calculation processing section to said server and wherein said mobile communicating device has a program control section implement, on said mobile communicating device, said agent reconstructing section, said mobile communicating device side calculation processing section, said agent transmitting section based on said place code transmitted from said server (paragraphs [0043-0044, 0054-0055]).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 6, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lohr et al. (hereinafter "Lohr", US Patent Publication 2002/0112063 A1) in view of Smith et al. (hereinafter "Smith", US Patent 6,532,543 B1).

As per claim 4, Lohr discloses the mobile agent transfer system for mobile communicating devices according to Claim 3.

Art Unit: 2157

Lohr does not explicitly disclose wherein said server has a standby creating section used transmit, said mobile communicating device, a standby list showing mobile agents being in a standby state to be transferred to said mobile communicating device, wherein said mobile communicating device has a standby displaying section used provide said standby list said program acquiring section of said user or other device out of mobile agents indicated by said provided standby list, and wherein said program acquiring section configuration so as to make a request for acquiring said server.

However, in an analogous art, Smith discloses an agent module that establishes communication with the server. The agent module is used to download other components that may be needed (column 3, lines 47-58, column 9, lines 35-44).

Therefore, one of ordinary skill in the art at the time the invention was made would have found it obvious to implement or incorporate Smith's standby list in Lohr's method in order to download needed components to the existing file.

As per claim 6, Lohr discloses the mobile agent transfer system for mobile communicating devices according to claim 3.

Lohr does not explicitly disclose wherein said agent transferring section has an agent waiting section used to manage information about an identifier of a mobile agent and location of a program code of said mobile agent being in a standby state to be transferred to said mobile communicating device, a program description creating section used to make request of program archive creating section to create an archive when a request for a program description file a mobile agent is made from said program

Art Unit: 2157

acquiring section and return said program description file containing a location said archive created by said program archive creating section to said program acquiring section and program archive creating section used to create, response to a request from said program description file creating section, archive containing program code mobile agent, information about an internal state of said mobile agent, and a place code, and to return, program acquiring section, response a request from said archive. However, in an analogous art, Smith discloses an agent module that establishes communication with the server. The agent module is used to download other components that may be needed (column 3, lines 47-58, column 9, lines 35-44).

Therefore, one of ordinary skill in the art at the time the invention was made would have found it obvious to implement or incorporate Smith's standby list in Lohr's method in order to download needed components to the existing file.

As per claim 10, Lohr disclose the method for transferring devices according said portable device, claim 9.

Lohr does not explicitly discloses wherein said server transmits, a standby list showing mobile agents being standby state to be transferred to said portable device and wherein said portable device provides said standby transmitted a request of said server other device mobile agents indicated provided standby list.

However, in an analogous art, Smith discloses an agent module that establishes communication with the server. The agent module is used to download other components that may be needed (column 3, lines 47-58, column 9, lines 35-44).

Therefore, one of ordinary skill in the art at the time the invention was made would have found it obvious to implement or incorporate Smith's standby list in Lohr's method in order to download needed components to the existing file.

Response to Arguments

5. Applicant's arguments filed have been fully considered but they are not persuasive.

The Office notes the following argument:

(a) Inventors swear to a date of invention prior to February 14, 2001 as evidenced by draft Japanese application prepared by a Japanese law firm, dated February 14, 2001.

In response:

(a) Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Therefore, the rejection using Lohr as prior art still stands.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 2157

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barbara N. Burgess whose telephone number is (571) 272-3996. The examiner can normally be reached on M-F (8:00am-4:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571) 272-4001. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
